## SPRAY/POUR DISPENSING EQUIPMENT

The patented Foampro F1000 is a multi-purpose polyurethane foam dispenser. The F1000 requires no complex and expensive mechanical pumps, heaters, proportioners, or even electricity. The uncomplicated design of the F1000 makes it very affordable.

The Foampro F1000 was designed with reliability in mind. Since the F1000 has only a minimal number of moving parts, it is very easy to operate as well as easy to maintain.

The F1000 dispenser can process many different types of foam systems, from flotation foam, insulation or molding foams and adhesives. The F1000 can either spray or pour foam by using different interchangeable tips. The F1000 dispenser has an output of up to 30 lbs./minute. An optional timer is available for metered, repeatable shot dispensing.

Polyfoam Products supplies Polypro foam systems in returnable shipping containers, eliminating the problems involved in disposing of empty drums. The cylinders are available in 17 gal., 60 gal., 120 gal., and 350 gal. sizes.
